

Magellan[®] Tunnel Reader Series: MSTRP-6464

Magellan[®] Tunnel Reader Series: MSTRP-6464

Like its smaller siblings, the MSTRP-6464 is a robust and reliable tunnel reader. With its 640x640mm aperture, this tunnel is capable of reading large size loan kit boxes, even stacked two high - for even faster reconciliation.

Features

Very high speed identification, reading, writing and verification of multiple tags using 8 reply channels

Capable of writing reliably a unique 96-bit number such as an Electronic Product Code (EPC) at a rate of 3,000 tags per minute

Ability to identify and read 96-bits at a rate of 15,000 tags per minute

Reliable identification of tightly stacked, overlapping or touching tags

Operates with a wide range of PJM StackTag[®] inlets

A powerful processing platform allowing for stand-alone reader operation

Orientation insensitive reading and writing

No interference between tunnels placed closely together

Robust design

Offers USB and Ethernet interface options
